NewNet Introduces “Ask Savespace” That Lets You Ask Questions About Your Own Memories

Ask your memories—your new personal AI

Savespace, provided by NewNet, Inc., has launched a new feature called “Ask Savespace,” which allows users to ask questions about information they have saved in the past. With this feature, Savespace users can now experience what it’s like to ask their past selves about something they vaguely remember.

Compatible with a Wide Range of Saved Data

Ask Savespace can handle various types of data saved in Savespace, including web pages, PDF files, screenshots, images, text notes, videos, and audio. It interprets these with AI and generates appropriate answers.

Specify the Item You Want to Ask About

When generating an answer, users can optionally specify which item or category the question relates to. This includes specific items, item tags users have manually attached, categories automatically generated by Savespace, or even general search keywords. The AI’s proprietary algorithm uses this context to narrow down the search and produce relevant answers.

Your Extended Memory That Thinks With You

Ask Savespace is more than just a search engine. It supports not only memory retrieval but also human intellectual activities like planning trips or brainstorming ideas. It’s a new type of personal AI for this new era.

Pricing and Availability

Ask Savespace is available free of charge to all Savespace users, with a usage limit of up to three times per day. The Savespace app is compatible with iOS/iPadOS. Download here: <https://newnet.inc/en/savespace>

About NewNet, Inc.

NewNet, Inc. is a Tokyo-based company that develops apps and devices for a new internet experience. We aim to create tools that help users record and retrieve information from their lives, and support meaningful human activities.
